Phased Roadmap

4. Data Sources & Methodology

1. Executive Summary

This report presents a comprehensive SEO audit of **smartpetgadgets.com.br** for a **Affiliate/review content site (pet gadgets niche, pt-BR), static HTML, 77 posts, no direct e-commerce checkout** site, generated on October 22, 2026. Findings combine technical, content, schema, performance, visual, and search-readiness evidence as available.

87/100

SEO HEALTH SCORE

Critical Issues Found:

1. HIGH (SxO): ranking bottleneck is page-type/format mismatch on commercial head terms — SERPs for 'melhor comedouro automático' and 'coleira gps' are dominated by multi-product Top-N listicles with ItemList schema; several site pages carry listicle titles but are single-product essays with 1 image and 1 affiliate link (SXO Gap Score 60/100)
2. HIGH (Google API, confirmed): indexation is solved (11/11 sampled URLs indexed, 0 sitemap errors) but ranking is the real blocker — avg. position 10.1 is misleading; every head term with real impression volume ranks far outside page 1 (e.g. 'melhor comedouro automático para gatos' pos 45.5, homepage pos 40.6 with 0 clicks/38 impressions over 28 days)
3. MEDIUM (GEO/Authority): Organization.sameAs has only Facebook — no YouTube, Reddit, or Wikidata; Person (author) schema still missing an image, capping citation authority for AI engines and E-E-A-T trust signals
4. MEDIUM (Sitemap/Agentic): cerca-virtual-para-cachorro (restored 2026-10-19) is live and in sitemap.xml but missing from llms.txt and .data/site-index.json — both manifests predate the restore and need regenerating
5. INFO (paused by owner): 62/77 posts have affiliate links but no Product/Review schema, and the comedouro cluster's CTA/product sections are spec-restatement with 1-3 links — known issue, reformulation explicitly paused pending content rework, not a mechanical fix

Quick Wins:

1. Regenerate llms.txt and .data/site-index.json to include cerca-virtual-para-cachorro (5 min fix)
2. Add Person.image (author photo) across author schema — unlocks AI citation authority signal
3. Add YouTube/Wikidata/additional sameAs entries to Organization schema
4. Fix worstRating inconsistency ('1' vs '0') between comedouro-newpet-2l-review and sibling review posts
5. Enable Chrome UX Report API for the srv-blogs service account — CrUX calls are returning 403 (permission/enablement gap, not a traffic-volume issue), blocking real field-data CWV verification

2. Audit Categories

2.1 Technical SEO

Score: 96/100

What Works

- robots.txt with explicit per-bot Content-Signal AI-crawler governance
- Sitemap valid (78 URLs), 0 errors/warnings confirmed live via GSC Sitemaps API
- HTTPS enforced with HSTS, CSP, X-Frame-Options, X-Content-Type-Options, Referrer-Policy
- No redirect chains anywhere tested; 404s return proper status
- Live PageSpeed: Performance 100, LCP 1.58s, CLS 0, TBT 0ms on sampled post
- 0 invalid JSON-LD across all 77 posts
- Fully static SSR, no SPA/JS-rendering dependency
- IndexNow key live and auto-pinged by deploy.sh on every publish (previously flagged missing, now fixed)

Findings

Homepage image volume worth a dedicated PSI check Low

Homepage carries more images than sampled posts; not yet isolated in a dedicated PSI run.

Recommendation: Run a standalone PSI check on the homepage image set.

Two posts with slightly long titles Low

Two post <title> tags exceed the recommended SERP display length.

Recommendation: Trim to under ~60 characters.

Homepage FAQ heading without matching FAQPage schema Low

Homepage has a visible FAQ-style heading not backed by FAQPage JSON-LD.

Recommendation: Add FAQPage schema or remove the FAQ-styled heading.

Person schema still missing image field Low

Author Person schema now has sameAs/description but no image, despite improvement since last audit.

Recommendation: Add an author photo and image property.

2.2 Content Quality

Score: 79/100

What Works

- Author page now 772 words with honest credential disclosure, jobTitle, sameAs, ProfilePage+Person schema
- Honest-disclosure model: only 3 posts claim hands-on testing, all three explicitly state 'não testamos fisicamente'
- 0 HIGH cannibalization conflicts across 2485 page pairs; overlaps are intentional pillar/FAQ pairs
- Metadata templating re-run: site_risk low, templated_ratio 0.0, no shared CTA phrases
- AI citation readiness 82/100
- Median post length 849 words (healthy)

Findings

Author identity still thin on visual/entity signals Medium

No author photo/image, only one sameAs (Facebook), generic jobTitle.

Recommendation: Add author photo, additional sameAs profiles, and a specific jobTitle.

Experience signal structurally capped Medium

Honest curation model (no physical testing disclosed) caps first-hand Experience E-E-A-T signal.

Recommendation: Add real first-hand artifacts (photos, unboxing notes) to 3-4 flagship review posts only, not site-wide.

Thin content tail Medium

8 posts under 600 words, 31 under 800 words; 'sobre' page 382 words, 'contato' 190 words.

Recommendation: Expand thinnest posts and the about/contact pages.

Comedouro cluster CTA/product sections remain shallow Info

Body copy is substantial (1300-1700w) but CTA/product sections restate specs with 1-3 links. Matches a known, owner-paused issue.

Recommendation: Do not apply a mechanical fix; wait for the planned content/offer reformulation.

2.3 On-Page SEO

Score: 88/100

What Works

- 77/77 posts have titles, descriptions, and canonical tags
- 0 multi-H1 or missing-H1 pages across 77 posts
- 1,333 internal links site-wide, 0 HIGH cannibalization conflicts
- Consistent mobile viewport meta across sampled pages

Findings

No dedicated full on-page sweep run this cycle Info

Title/meta/heading checks were covered as a byproduct of the Technical, Content, and Sitemap audits rather than a standalone on-page pass; score here is a synthesis, not an independent specialist score.

Recommendation: Run a dedicated seo-page/on-page pass on the full 77-post set in a future audit cycle for independent verification.

2.4 Schema / Structured Data

Score: 86/100

What Works

- Critical non-genuine AggregateRating (5501 reviews) on coleira-seresto-antipulgas: fixed, confirmed zero aggregateRating blocks site-wide
- Deprecated HowTo/HowToStep on configurar-app-comedouro-wifi: removed, confirmed zero HowTo blocks site-wide
- Organization.sameAs populated with live Facebook page (was empty)
- Newpet 2L/4L Product disambiguation confirmed live with explicit 'não deve ser confundido' language
- Honest disclosure schema text confirmed live on comedouro-newpet-2l-review

Findings

Person.image still missing on author page Medium

Author Person schema has sameAs and description but no image property.

Recommendation: Add an author photo URL to the Person schema.

worstRating inconsistency Low

comedouro-newpet-2l-review uses worstRating '1' vs '0' on sibling review posts.

Recommendation: Standardize worstRating value across all Review schema blocks.

FAQPage schema on 73/77 posts has no current Google SERP benefit Info

FAQPage rich results were retired by Google; this is informational, not actionable.

Recommendation: No action needed; do not invest further effort here.

62/77 posts have affiliate links but no Product/Review schema Info

Real opportunity, but explicitly paused by the site owner pending a content/offer rework.

Recommendation: Do not apply mechanically; revisit after the planned reformulation.

2.5 Performance (CWV)

Score: 94/100

What Works

- Live PSI: homepage 100/100 mobile and desktop; LCP 0.4-1.4s, CLS 0, TBT 0ms across sampled pages
- Prior-audit hero LCP issue (2.24s, CSS background JPEG) fixed: now WebP + preload/fetchpriority=high, LCP down to 1.38s
- No render-blocking CSS/JS, no third-party ad/tracking scripts, system-font stack
- Correct width/height on all images (CLS=0), correct lazy/eager loading split
- Multi-MB images seen in git status (img/ML/*, img/TAPETE_HIGIENICO/*, social-content-engine cache) confirmed NOT referenced in any published HTML — no live-site impact

Findings

CrUX field-data API returning 403 Forbidden Medium

chromeuxreport.googleapis.com returned 403 for all tested URLs via the srv-blogs service account — an API-enablement/permission issue, not a traffic-volume 404.

Recommendation: Enable the Chrome UX Report API for the srv-blogs@smartpetgadgets-seo.iam.gserviceaccount.com service account to unlock real field-data CWV verification.

2.6 AI Search Readiness

Score: 82/100

What Works

- Lighthouse Agentic Browsing fraction 3/3 on both mobile and desktop
- Agent-UX heuristic 100/100: 224 real anchors, 0 fake div-onclick widgets, 78 semantic landmarks, 0 unnamed interactive nodes in a 1,567-node tree, full content renders with no JS
- robots.txt explicitly allows all major citation bots (OAI-SearchBot, Claude-SearchBot, PerplexityBot, Googlebot, Bingbot, Applebot) with a deliberate ai-train=no Content-Signal posture
- llms.txt covers 76/77 posts (up from a 6-link stub in a prior audit)
- Answer-first copy, question-based FAQ headings, rich JSON-LD (BlogPosting, FAQPage, BreadcrumbList, ItemList/ Product/Review on comparison pages)

Findings

Organization/Person entity graph thin for AI citation authority High

sameAs has only one link (Facebook); no YouTube, Reddit, or Wikidata. Person schema lacks image/rich sameAs. This is the main cap on AI citation for competitive commercial queries.

Recommendation: Build out the entity graph: add YouTube channel, Wikidata entry if eligible, and additional author sameAs profiles; add Person.image.

llms.txt missing one live article Medium

cerca-virtual-para-cachorro (restored 2026-10-19) is missing from llms.txt, which predates the restoration.

Recommendation: Regenerate llms.txt from the current sitemap as a build step, not a one-off manual edit.

No video / VideoObject schema (multi-modal gap) Medium

Strong image/alt/ImageObject coverage but zero video content across 77 posts.

Recommendation: Consider short product-demo videos with VideoObject schema for flagship review posts.

No Markdown-equivalent delivery or /.well-known discovery files Info

No /index.md, no Accept: text/markdown negotiation, no ai-catalog.json. Expected for a content-only blog at this stage, not a defect.

Recommendation: Low priority; revisit if agent traffic patterns justify it.

2.7 Images

Score: 80/100

What Works

- Correct width/height attributes preventing CLS across sampled pages
- Correct lazy/eager loading split
- WebP format in use on fixed hero images
- Large unused image assets in the repo confirmed not referenced in published HTML (no live performance cost)

Findings

Thin media on comparison/listicle-style posts Medium

Median 1-3 images and 1 affiliate link on pages competing against SERP listicles that show 5-10 product images plus tables.

Recommendation: Add more product images per listed option on head-term commercial pages, tying into the SxO page-type-mismatch fix.

3. Action Plan

Phase 1: Critical Fixes Week 1

- None — no Critical-severity findings remain open this cycle; all prior Criticals (fake AggregateRating, deprecated HowTo, dark-mode logo contrast) are confirmed fixed.

Phase 2: High-Impact Improvements Weeks 2-3

- Rebuild the 2-3 'melhor X' pages that carry listicle titles but ship single-product content (melhor-coleira-gps-sem-mensalidade, melhor-camera-para-monitorar-pet, melhor-bebedouro-automatico-pet) as true multi-product listicles with ItemList schema, 5+ options, and tables — reuse the melhor-comedouro-automatico-cachorro template that already competes well
- Build out Organization/Person entity graph (YouTube, Wikidata, additional sameAs, Person.image) to raise AI/E-E-A-T citation authority
- Target the under-served 'sem mensalidade / sem assinatura' modifier across the GPS collar cluster
- Enable Chrome UX Report API for the srv-blogs service account to restore real CWV field-data visibility

Phase 3: Content & Authority Month 2

- Add real first-hand artifacts (photos, unboxing notes) to 3-4 flagship review posts to raise the Experience E-E-A-T signal
- Expand the 8 posts under 600 words and the sobre/contato pages
- Add Product/ItemList schema and additional images to the GPS collar cluster's informational guides
- Regenerate llms.txt and .data/site-index.json to include cerca-virtual-para-cachorro, and wire llms.txt generation into the deploy/sitemap build step going forward
- Fix the worstRating inconsistency across Review schema blocks

Phase 4: Monitoring & Iteration Ongoing

- Track GSC position for the sampled head terms (currently avg. position 10.1 overall but 18-45+ on real-volume queries) monthly after Phase 2 listicle rebuilds ship
- Re-run CrUX field-data checks once the API-enablement issue is resolved
- Revisit the comedouro cluster's thin CTA/product sections once the owner's planned content/offer reformulation is ready — do not apply a mechanical fix before then
- Capture a drift baseline now that none exists, to track regressions across future deploys

Data Sources & Methodology

Source	Description	Update Frequency
PageSpeed Insights API	Lighthouse lab audit (mobile emulation, Moto G Power, slow 4G)	Real-time
Chrome UX Report (CrUX)	28-day rolling field data from real Chrome users	Daily ~04:00 UTC
CrUX History API	25-week p75 trend data per metric	Weekly
Google Search Console	Search Analytics (clicks, impressions, CTR, position)	2-3 day lag
URL Inspection API	Per-URL index status, coverage state, crawl info	Real-time (2,000/day)

Report generated by Claude SEO (Google SEO Intelligence Skill), October 22, 2026
Methodology based on Google Web Vitals thresholds, Search Console documentation, and Lighthouse scoring algorithms.
