4. Data Sources & Methodology

1. Executive Summary

This report presents a comprehensive SEO audit of **smartpetgadgets.com.br** for a **Affiliate content / publisher (pet gadgets niche, Brazilian Portuguese)** site, generated on September 30, 2026. Findings combine technical, content, schema, performance, visual, and search-readiness evidence as available.

86/100

SEO HEALTH SCORE

Critical Issues Found:

1. Critical: AggregateRating on coleira-seresto-antipulgas (4.8*, 5501 reviews) looks copied from a marketplace rather than on-site collected -- manual action risk
2. High: head commercial queries (melhor antipulgas, comedouro automatico, coleira gps) lose to marketplaces and 5-10 item listicles with tables/photos -- page format/breadth mismatch
3. High: no first-hand product experience signals (site admits reviews start from vendor photos/specs) -- E-E-A-T Experience ceiling
4. Medium: Organization schema sameAs is empty despite the Facebook page being live
5. Medium: llms.txt lists only 5 static pages, omitting all 70+ articles

Quick Wins:

1. Populate Organization.sameAs with the live Facebook page URL
2. Remove the copied AggregateRating on coleira-seresto-antipulgas
3. Trim the melhor-antipulgas-para-cachorro meta description from 221 to ~155 chars
4. Fix the /autores/ index 403 (individual author page works, hub page doesn't)
5. Expand or retire llms.txt to represent the actual article catalog

2. Audit Categories

2.1 Technical SEO

Score: 92/100

What Works

- HTTP->HTTPS and www->non-www both clean single-hop 301s to canonical <https://smartpetgadgets.com.br/>
- HSTS, CSP, X-Frame-Options, nosniff, Referrer-Policy headers present
- robots.txt well-formed with granular per-bot Content-Signal directives, correctly disallows /reports/
- Sitemap live, 77 URLs, no orphaned/blocked pages
- Fully static server-rendered HTML, no SPA/JS-rendering risk
- Canonicals self-referential and consistent, no noindex found

Findings

IndexNow protocol not implemented **Medium**

No IndexNow submission on publish/update, relying on standard crawl discovery.

Recommendation: Implement IndexNow ping on publish/update for faster Bing/Yandex pickup (Bing Copilot surface benefits directly).

CSP is minimal **Low**

Content-Security-Policy header present but permissive/minimal.

Recommendation: Tighten CSP directives incrementally; low priority given static-site low attack surface.

2.2 Content Quality

Score: 82/100

What Works

- Every article opens with a direct-answer sentence + Key Takeaways block
- Valid BlogPosting/Product/FAQ/Breadcrumb JSON-LD
- Dated, attributable stats (e.g. 5.501 avaliacoes, retrieved 2026-09-14)
- Affiliate disclosure, veterinary caveats, named Person author with bio
- No AI-phrasing watermark tells; natural BR-PT prose

- Zero content templating (site_risk low, templated_ratio 0.0)

Findings

No first-hand product experience signals **High**

The /sobre/ page admits reviews start from vendor photos/specs, not hands-on testing. This caps the Experience pillar of E-E-A-T (scored 55/100).

Recommendation: Add real hands-on signals (owned-unit photos, usage notes, video) where feasible, or explicitly reframe posts as comparative spec analysis rather than implied hands-on reviews.

Several articles are thin **Medium**

4 sampled articles run 500-903 words against a higher coverage floor seen elsewhere on the site (1,390-1,430 words).

Recommendation: Expand or consolidate thin satellite articles into their pillar pages.

Organization schema sameAs is empty **Medium**

Homepage Organization JSON-LD has sameAs: [] despite the Facebook page (@smartpetgadgetsbr) being live.

Recommendation: Add the Facebook URL now; add other profiles as they go live.

/autores/ index returns 403 **Medium**

Individual author page (/autores/nildo-alves/) returns 200, but the author index/hub returns 403, breaking author-entity navigation.

Recommendation: Fix server config or remove the broken hub link if not needed.

2.3 On-Page SEO

Score: 85/100

What Works

- Unique, descriptive, keyword-led title tags (53-75 chars) on all samples
- H1 present exactly once per page, distinct from title
- Unique meta descriptions on all samples
- Clean, keyword-descriptive URL slugs

Findings

Meta description over length on at least one article **Medium**

melhor-antipulgas-para-cachorro meta description is 221 characters, well past Google's ~155-160 char practical truncation point.

Recommendation: Trim to ~150-160 chars; run a length sweep across all 76 URLs since similar comparison-style posts likely share the pattern.

2.4 Schema / Structured Data

Score: **82/100**

What Works

- BlogPosting, Person, Organization, BreadcrumbList well-formed across all 76 pages
- No missing required properties, no deprecated types
- JSON-LD, https, absolute-URL, ISO-date best practices followed throughout

Findings

AggregateRating on coleira-seresto-antipulgas looks copied from a marketplace **Critical**

4.8-star / 5,501-review AggregateRating appears sourced from a third-party marketplace rather than collected on-site -- a Google manual-action risk (misrepresented structured data policy).

Recommendation: Remove the AggregateRating block; keep the editorial Review-only schema, matching the pattern already used on the other 7 product pages.

FAQPage schema has zero current SERP value **Info**

71/76 pages carry FAQPage schema, but per Google's 2026-05-07 policy update, FAQ rich results are no longer shown site-wide (not just gov/health as originally rolled out).

Recommendation: No removal needed (harmless), but stop reporting FAQPage as an SEO asset internally -- it no longer earns SERP real estate.

sameAs empty / Review.author type inconsistent **Medium**

Homepage Organization.sameAs is []; Review.author alternates between Person and Organization across product pages.

Recommendation: Populate sameAs with live social profiles; standardize Review.author type across all product review posts.

2.5 Performance (CWV)

Score: **98/100**

What Works

- LCP: 0.9-2.0s across homepage + 2 sampled articles, well under 2.5s Good threshold
- Total Blocking Time: 0ms on every sampled page (strong INP proxy)
- CLS: 0.0 on all three sampled pages

Findings

CrUX field data unavailable (403) **Low**

Both CrUX single-period and 25-week-history API calls returned 403 -- likely the API isn't enabled for the configured GCP project, not a site issue. May also reflect insufficient real-user traffic volume for CrUX's reporting threshold.

Recommendation: Check Google Cloud Console CrUX API enablement; re-check once organic traffic volume grows.

2.6 Images

Score: **90/100**

What Works

- 100% alt-text coverage on all sampled pages (homepage's 71 images + both sampled articles)
- loading=lazy applied consistently on homepage cards
- width/height set on homepage cards, preventing CLS
- WebP used on many hero images

Findings

Uneven image count per article **Low**

melhor-antipulgas-para-cachorro has only 4 images across ~1,656 words; coleira-gps-para-pet has just 1 -- thin relative to competing marketplace/listicle SERPs showing 5-10 product photos (see SXO finding).

Recommendation: Add 1 product image per compared item when rebuilding head-term pages into fuller listicles.

2.7 AI Search Readiness

Score: 80/100

What Works

- Lighthouse Agentic Browsing: 3/3 mobile and desktop (accessibility-tree, CLS, llms.txt checks pass)
- Agent-UX accessibility-tree heuristic: 100/100, 220 clean interactive nodes, 0 unnamed elements
- Deliberate, consistent Content-Signal policy across all 16 crawler groups (search=yes, ai-input=yes, ai-train=no)
- Static SSR HTML fully visible to non-JS-executing AI crawlers

Findings

llms.txt omits the article catalog **Medium**

llms.txt lists only 5 static pages (Home, Sobre, Contato, Política editorial, Autores), omitting all 70+ published articles that AI search bots are explicitly allowed to cite.

Recommendation: Expand llms.txt to list key pillar/cluster pages (10-20 highest-value URLs), or retire it as a maintained artifact -- it carries no Google Search ranking weight either way.

No verified brand-mention footprint beyond own domain **Medium**

No confirmed Wikipedia, Reddit, YouTube, or LinkedIn presence. Brand mentions correlate 3x more strongly with AI citations than backlinks (Ahrefs Dec 2025 study).

Recommendation: Start with YouTube (highest citation correlation) leveraging existing content assets; populate Organization.sameAs profiles go live.

3. Action Plan

Phase 1: Critical Fixes Week 1

- Remove the copied AggregateRating on /coleira-seresto-antipulgas/ (manual-action risk)
- Populate Organization.sameAs with the live Facebook page URL
- Fix the /autores/ index 403

Phase 2: High-Impact Improvements Weeks 2-3

- Rebuild head-commercial-term pages (melhor-antipulgas-para-cachorro, comedouro-automatico-para-pet, melhor-coleira-gps-sem-mensalidade) as fuller ranked listicles (5-8 items) with an above-fold comparison table and clear 'Ver preco' CTAs -- close the format gap against marketplace/listicle SERPs
- Add product images per compared item on rebuilt listicle pages
- Trim the melhor-antipulgas-para-cachorro meta description to ~155 chars; sweep all 76 URLs for the same over-length pattern
- Expand thin satellite articles (500-903 words) into their pillar pages

Phase 3: Content & Authority Month 2

- Add real hands-on product-experience signals (owned-unit photos, usage notes) where feasible, or explicitly reframe as comparative spec analysis
- Build brand-mention footprint starting with YouTube, leveraging existing content/images
- Expand llms.txt to represent the real article catalog (or retire it)
- Implement IndexNow for faster Bing/Yandex pickup

Phase 4: Monitoring & Iteration Ongoing

- Re-check CrUX API enablement in Google Cloud Console; re-pull field CWV data once traffic grows
- Track 'cerca virtual para cachorro' (currently position 11.1) as the closest page-1 breakout candidate
- Re-run GSC Search Analytics monthly to track position/CTR movement on head-term pages post-rebuild
- Standardize Review.author schema type across all product review posts

Data Sources & Methodology

Source	Description	Update Frequency
PageSpeed Insights API	Lighthouse lab audit (mobile emulation, Moto G Power, slow 4G)	Real-time
Chrome UX Report (CrUX)	28-day rolling field data from real Chrome users	Daily ~04:00 UTC
CrUX History API	25-week p75 trend data per metric	Weekly
Google Search Console	Search Analytics (clicks, impressions, CTR, position)	2-3 day lag
URL Inspection API	Per-URL index status, coverage state, crawl info	Real-time (2,000/day)

Report generated by Claude SEO (Google SEO Intelligence Skill), September 30, 2026
Methodology based on Google Web Vitals thresholds, Search Console documentation, and Lighthouse scoring algorithms.
